

CMPS 260

Programming Project Submissions

In order to submit programming projects for grading in CMPS 260, your code must be in a subdirectory of your class directory. From the command line in that directory, type:

```
submit -d file1 file2 file3 ...
```

The submit system will ask for the CLID of your TA and the name of the assignment. This information is provided on the class Moodle site at the link to the assignment.

The assignment name must take the following form:

`projx` where `x` is the number of the programming project

Finally, the system will present a report of its success or failure. (Note: If the system does not explicitly state that the submission was successful, it likely was not.)
